

# **Download Advances In Laser Materials Processing Technology Technology Research And Applications**

A laser is a device that emits light through a process of optical amplification based on the stimulated emission of electromagnetic radiation. The term "laser" originated as an acronym for "light amplification by stimulated emission of radiation". Optics & Laser Technology aims to provide a vehicle for the publication of a broad range of high quality research and review papers in those fields of scientific and engineering research appertaining to the development and application of the technology of optics and lasers. Technology can be viewed as an activity that forms or changes culture. Additionally, technology is the application of math, science, and the arts for the benefit of life as it is known. We're taking a closer look at robot and automation classifications and more applications in this, and the next few, blogs. This new age of automation and robotics impacts additional available technology options including Industry 4.0.
