Judgement-based. A metalloid is an element with properties in between, or that are a mixture of, those of metals and nonmetals, and which is therefore hard to classify as either a metal or a nonmetal. Post-transition metals are a set of metallic elements in the periodic table located between the transition metals to their left, and the metalloids to their right. Enter your mobile number or email address below and we'll send you a link to download the free Kindle App. Then you can start reading Kindle books on your smartphone, tablet, or computer - no Kindle device required. Last week, I spoke at a memorial service for Linda L. Knight. She was my teacher in first grade, and she later became a friend of mine. She was an important part of my life, so I want to share the approximate text of my eulogy.
