The Society for Vascular Surgery (SVS) and the American Venous Forum (AVF) have developed clinical practice guidelines for the care of patients with varicose veins of the lower limbs and pelvis. Until recently, surgical correction of presbyopia was considered the “last frontier” in ophthalmology, but today there are a wide variety of treatments available. The aortic arch has three branches, the brachiocephalic trunk, left common carotid artery, and left subclavian artery. The biceps femoris (/ ? b a ? s ? p s ? f ? m ? r ? s /) is a muscle of the thigh located to the posterior, or back. As its name implies, it has two parts, one of which (the long head) forms part of the hamstrings muscle group.
