Cable Types and Their Differences Home audio conductors fall into two broad categories, interconnects and speaker cables. The former connect the source (turntable, CD player, tape deck, music server, tuner, and so on) to the control center (preamp, receiver, or integrated amplifier), as well as the preamp to the power amplifier. Recently I stumbled upon a method of connecting audio components I had never encountered, and it centers on the use of interconnects. I'll not spend time discussing the efficacy of cabling; the reader will either be convinced of the merits of aftermarket cables, or will not.
