In computer science, functional programming is a programming paradigm—a style of building the structure and elements of computer programs—that treats computation as the evaluation of mathematical functions and avoids changing-state and mutable data. Testimonials “As our business evolves, we must have merchandise information systems that will allow us to quickly and effectively react. Soft Solutions has demonstrated to us that their product capabilities can meet this challenge. Computational chemistry is a branch of chemistry that uses computer simulation to assist in solving chemical problems. It uses methods of theoretical chemistry, incorporated into efficient computer programs, to calculate the structures and properties of molecules and solids. Functional languages use a different paradigm than imperative and object-oriented languages. They use side-effect-free functions as a basic building block in the language.
