

Download Grow Tree Seedlings Containers Greenhouses

Who are we? We are Empire National Nursery, LLC. We are America's first 24-hour on-line Nursery, and our greenhouses are packed with tree seedlings, shrubs, and more. It is easy to plant magnolia seeds in your yard to grow a tree, especially if you already have an established tree at your disposal. The magnolia is native to the Americas, China, and the West Indies, and famous for its huge white or pink blooms with large thick petals that are tough, but look delicate. A Minnesota Certified Nursery Stock Grower, we have been growing containerized tree seedlings since 1978 in west central Minnesota. Our seedlings are used for reforestation and conservation and, when individually bagged, for gifts and promotions. The American beech tree is popular for its deep gold or copper autumn foliage and for its shade-producing canopy. Although you can purchase a sapling and transplant it into your yard, planting beech tree seeds is relatively simple.
