

# Download Hardware Defined Networking

Networking Solutions – bereit für neue Herausforderungen. IT-Abteilungen stehen heute vor der Herausforderung, schnell und flexibel auf sich ändernde Geschäftsanforderungen reagieren zu müssen. Software-defined networking (SDN) technology is an approach to cloud computing that facilitates network management and enables programmatically efficient network configuration in order to improve network performance and monitoring. SDN is meant to address the fact that the static architecture of traditional networks is decentralized and complex ...Acrosser supplies network hardware for security/telecommunication industries worldwide, and we offer chassis ODM/OEM customization service. To understand software-defined networking better, first we must look at how traditional networking architecture treats data packets. When a data packet arrives at a switch or router, the firmware tells the hardware where to forward the packet and sends all packets to that destination via the same path.
