

Download Hodgkin And Non Hodgkin Lymphoma

Non-Hodgkin lymphoma (NHL) is a group of blood cancers that includes all types of lymphoma except Hodgkin's lymphomas. Symptoms include enlarged lymph nodes, fever, night sweats, weight loss and tiredness. Other symptoms may include bone pain, chest pain or itchiness. Some forms are slow-growing, while others are fast-growing. Types of non-Hodgkin lymphoma. Treatment for NHL depends on which type it is, so it's important for doctors to find out the exact type of lymphoma you have. Non-Hodgkin Lymphoma (NHL), also known as non-Hodgkin disease, is a type of cancer that affects the lymphatic system, usually found in the lymph nodes. Non-Hodgkin lymphoma (NHL) options include chemotherapy, radiation, targeted therapy, plasmapheresis, surveillance, stem cell transplant, and surgery. Learn more about types of NHL and treatments in this expert-reviewed summary.
