

# Download How To Build Your Own House

## Foundation

With the excavation, foundation, and concrete work done, soon you'll start to recognize your project as a house. That's because now the framing carpenters will arrive to put up the lumber framework for the floors, walls, and ceilings, and then move to the sheathing, siding and roofing installation. This work can happen with remarkable swiftness. In the space of a week or two, you may suddenly recognize your house as a house. Regardless of whether you contract their services or elect to design your own, the house you build will be built for you, so you should be involved closely in the design process. Before you hire or consult an architect, find out what management services the firm may or may not provide. Lots of people dream about someday planning and building their dream home. Whether it's your dream home or not, building a house can be a rewarding experience and like all things, it starts with the foundation. How to Build a Concrete Foundation. A concrete foundation is a base for a structure. The type and size of concrete foundation you will need is based on the structure you will place upon it. You may need a concrete foundation for a...
