

Download Human Values And The Design Of Computer

Human-computer interaction (HCI) researches the design and use of computer technology, focused on the interfaces between people and computers. The persona method has developed from being a method for IT system development to being used in many other contexts, including development of products, marketing, planning of communication, and service design. Today, we start with the Value Alignment principle. Value Alignment: Highly autonomous AI systems should be designed so that their goals and behaviors can be assured to align with human values throughout their operation. Human Interface Guidelines. These guidelines are designed to help developers and designers create a beautifully consistent experience on the elementary OS desktop.
