The precursor to a hypothesis is a research problem, usually framed as a question. It might ask what, or why, something is happening. For example, we might wonder why the stocks of cod in the North Atlantic are declining. What follows is a hypothetical example of a research paper based on an experiment. The earliest use of statistical hypothesis testing is generally credited to the question of whether male and female births are equally likely (null hypothesis), which was addressed in the 1700s by John Arbuthnot (1710), and later by Pierre-Simon Laplace (1770s). Before beginning your paper, you need to decide how you plan to design the study. The research design refers to the overall strategy that you choose to integrate the different components of the study in a coherent and logical way, thereby, ensuring you will effectively address the research problem
