## **International Electrotechnical**

National and international standards organisations were set up to facilitate trade by encouraging greater product interoperability and compatibility as well as setting standards for acceptable product safety, quality and reliability. Leakage inductance derives from the electrical property of an imperfectly-coupled transformer whereby each winding behaves as a self-inductance in series with the winding's respective ohmic resistance constant. Rail terminology is a form of technical terminology. The difference between the American term railroad and the international term railway (used by the International Union of Railways and English-speaking countries outside the United States) is the most significant difference in rail terminology.
