Naturalistic Epistemology. Naturalistic epistemology is an approach to the theory of knowledge that emphasizes the application of methods, results, and theories from the empirical sciences. Incommensurability. Incapable of being measured against a common standard. The presumed incommensurability of individual human pleasures is sometimes raised as an objection against hedonistic versions of utilitarianism. W. V. O. Quine describes naturalism as the position that there is no higher tribunal for truth than natural science itself. In his view, there is no better method than the scientific method for judging the claims of science, and there is neither any need nor any place for a "first philosophy", such as (abstract) metaphysics or epistemology ... Naturalism. Naturalism is an approach to philosophical problems that interprets them as tractable through the methods of the empirical sciences or at least, without a distinctively a priori project of theorizing.
