Jeremy Rifkin, né le 26 janvier 1945 à Denver dans le Colorado, est un essayiste américain, spécialiste de prospective (économique et scientifique). Entropy, in thermodynamics, is a state function originally introduced to explain why part of a thermodynamic system's total energy is unavailable to do useful work. The second law of thermodynamics, also known as the law of entropy, is considered one of the most fundamental laws of the universe. This law states that the disorder in the universe is constantly increasing in a single direction. Die Entropie (Kunstwort altgriechisch *entropía*, von *en* ‚an‘, ‚in‘ und *tropé* ‚Wendung‘) ist eine fundamentale thermodynamische Zustandsgröße mit der SI-Einheit Joule pro Kelvin (J/K).
