A manual transmission, also known as a manual gearbox, a standard transmission or colloquially in some countries (e.g. the United States) as a stick shift, is a type of transmission used in motor vehicle applications. Leave it to Ford to have a million different parts that do the exact same job for the same motors. For example, Ford 260, 289, early 302 along with all 351 motors used a 28 oz imbalance flywheel and harmonic balancer. A transmission is a machine in a power transmission system, which provides controlled application of the power. Often the term transmission refers simply to the gearbox that uses gears and gear trains to provide speed and torque conversions from a rotating power source to another device. I was taught how to drive manual, but physically I CANNOT because of a very bad knee injury to my left leg when I was in high school. I know how to drive one, but to drive one longer than a few minutes makes it so that I cannot walk for 2 days.
