SMC proteins represent a large family of ATPases that participate in many aspects of higher-order chromosome organization and dynamics. SMC stands for Structural Maintenance of Chromosomes. Epigenomics is the study of the complete set of epigenetic modifications on the genetic material of a cell, known as the epigenome. The field is analogous to genomics and proteomics, which are the study of the genome and proteome of a cell. This glossary — incomplete and under continual development — is for the project entitled "Biology Worthy of Life". Orderly progression through these cell-cycle phases is controlled by the sequential activation of the Cyclin-dependent kinases (Cdks) Cdk4/6, Cdk2 and cyclin Cdc2.
