Prawn is a common name for small aquatic crustaceans with an exoskeleton and ten legs (i.e. a member of the order decapoda), some of which can be eaten. Shrimp are swimming crustaceans with long narrow muscular abdomens and long antennae. Unlike crabs and lobsters, shrimp have well developed pleopods (swimmerets) and slender walking legs; they are more adapted for swimming than walking. Los carídeos (Caridea) son un infraorden de crustáceos decápodos marinos o de agua dulce, conocidos comúnmente como camarones, quisquillas o esquilas.
