

Download Simply Visual Basic 2010 Solution

I added some controls to my form at runtime and I need them to call a function when clicked. I don't know how many controls will be added but they all need to run the same function. As described in this Visual Studio forum post ([link below](#)), the basic issue is that a project in the solution is outside of the sub-tree that the solution itself is in. The following programs are written in Visual Basic 6. Mostly they are useful for the code snippets, but there are some fully-fledged applications here also. [Learn These Visual Studio 2010 Tips and Tricks](#). Focuses on the new features in Visual Studio 2010 and the most common keyboard shortcuts.
