

Download Test In Question Quest Diagnostics

Reference ranges are provided as general guidance only. To interpret test results use the reference range in the laboratory report. The CPT codes provided are based on AMA guidelines and are for informational purposes only. Levetiracetam is an anticonvulsant used as adjunct therapy to treat adult partial seizures. As multiple anticonvulsants are administered, it is important to monitor its level to (1) optimize therapy, (2) assure compliance, and (3) to avoid toxicity. I went in for a drug test for a new job. The person performing the test was cold and unfriendly and laughed at me when I asked a question, then completely ignored the other two questions I asked....Original review: Jan. 10, 2019. The worst company I ever been with in my life. Their customer service line has been busy every single hour for the past three days I been calling.
