

# Download The Fungi Diversity And Conservation In India Pdf

Biodiversity is not evenly distributed, rather it varies greatly across the globe as well as within regions. Among other factors, the diversity of all living things depends on temperature, precipitation, altitude, soils, geography and the presence of other species. In-situ conservation is the on-site conservation or the conservation of genetic resources in natural populations of plant or animal species, such as forest genetic resources in natural populations of Teagan species. It is the process of protecting an endangered plant or animal species in its natural habitat, either by protecting or restoring ...Wildlife Diversity Of India Himalayan mountain system. The west Himalayas have low rainfall, heavy snowfall (temperate conditions), whereas in east Himalayas, there is heavy rainfall, snowfall only at very high altitudes, whereas at lower altitudes conditions are similar to the tropical rain forests.2.2. Dataset. In total, eight taxonomic groups (fungi, lichens, herbaceous plants, woody plants, nematodes, insects, bats and passerine birds) were sampled in each sacred grove and the corresponding control site.
