A honey bee (or honeybee) is a eusocial, flying insect within the genus *Apis* of the bee clade. They are known for construction of perennial, colonial nests from wax, for the large size of their colonies, and for their surplus production and storage of honey, distinguishing their hives as a prized foraging target of many animals, including honey ...Entomologist E. O. Wilson calls honeybees humanity's greatest friend among the insects. Cornell professor and ardent beekeeper Seeley (*The Wisdom of the Hive*, 1995) examines how bees make decisions on where to found a new hive. During spring build-up, beekeepers often search for swarm cells in order to determine if the hive is preparing to swarm. But what is a swarm cell and how is it different from a supersedure cell?
